Personal Project

- Realtor is a **web-based application** intended for online retailers. It would make searching, viewing and selection of a property easier for user's specific to their needs. The application also provides **navigation help** such that the user can get accurate location. There is a **message Chabot** where a user can drop their queries and get quick assistance.
- It is made on **Django Framework & Python** as backend language
- **PostgreSQL** is used for **database handling**
